Business Controller

I am applying for the position as a controller because I have worked as a business controller in several organizations, including the manufacturing industry, and as an economist I have a great interest in financial management, project reconciliation, developing routines, calculating financial models, etc. Experienced user of Excel (incl. Pivot tables, Power Pivot) and has great experience working with analyses, accounting, calculations, financial statements, forecasts and development of processes.

Briefly about my roles as Business Controller and economist:

Within SCA's management team, we developed a new business concept and balanced scorecard.
Within Katrineholm Energi, I was responsible for the finances of several underlying companies.
Within the State Board of Institutions, monthly reporting and quality indicators were developed.
Within Trafikverket Inv, I developed financial management and the follow-up of key figures.
Within Lund University - I worked as an economist with, among other things, compiling budgets, making financial statements, forecasts, project reporting, managing the researchers' contracts.
Within the municipality of Eslöv, I work centrally with accounting, the facility registers.

I often try to have a helicopter perspective in order to be able to compare my own work with that of others, and thus learn from the experiences of other people/groups.

Worked in management team with finances, goals, key figures and quality indicators to connect finances and operations.

Believes a lot in developing the use of IT systems that enable good routines and clear communication. Worked a lot with Excel (Pivot tables etc), and with financial systems such as Raindance and Unit4 Agresso, as well as BI-systems such as QlikView, ProDiver, Power BI, Stratsys and Hypergene.

I also have experience working on a non-profit basis within idea-based organizations such as student organizations ("Kalmar Nation"), parent cooperatives, Wind Power Association ("Skånes vindkraftsakademi"); and as an accountant in Solar Energy Association ("Solar Region Skåne") and "Majblomman i Lund".
